CHAPTER 1. OVERVIEW OF RED HAT LIGHTSPEED ADVISOR SERVICE REPORTING

The advisor service enables you to share the status of your Red Hat Enterprise Linux infrastructure. You can download reports, share recommendations, and subscribe to the Weekly Report email.

You can share the status of your RHEL infrastructure in the following ways:

- Export and download a report in CSV, JSON, or YAML file format to share recommendations for your impacted RHEL systems with stakeholders.
- Subscribe to the advisor Weekly Report email to receive a brief summary of the health of your RHEL environment.
- Download an executive report to share a high-level overview of your infrastructure with an executive audience.

These methods provide a quick and easily accessible way for you and your stakeholders to assess the health of your infrastructure and plan accordingly.

CHAPTER 2. RED HAT LIGHTSPEED ADVISOR SERVICE DATA EXPORT

You can export a report in either JSON or CSV format that shows the recommendations that affect each of your registered systems. The report can help you understand your recommendations, solutions, and total risk.

Exported reports include the following information:

- Hostname
- Inventory UUID for the host
- RHEL version
- The date and time of the last data upload from the host to Red Hat Lightspeed
- The title of the recommendation that impacts the host
- A link to the solution for the recommendation
- The total risk posed by the recommendation on a scale from 1 to 4; 1 means low risk, 4 means high risk
- The likelihood of the recommendation being active on your registered systems on a scale from 1 to 4; 1 means unlikely and 4 means highly probable
- The date that the recommendation was published
- A link to the scan results for the host

2.1. EXPORT REPORTS USING THE ADVISOR SERVICE

You can export a report in either a CSV or JSON file by using the advisor service. You can share the report to update your stakeholders.

Procedure

1. Navigate to the Operations > Advisor > Recommendations page and log in.
2. Apply filters as needed to refine the results.
3. Click **Download** to the right of the search box in the toolbar.
4. Select either **Export to CSV** or **Export to JSON**.
5. In the dialog box, select **Open with** and specify an application, or click **Save File** and then click **OK**.

2.2. EXPORT ADVISOR SERVICE DATA USING THE API

Use the API to export filtered, active advisor recommendations impacting your RHEL systems in CSV or JSON format for automation or integration with external systems.

Procedure

- For CSV file type
  - Request URL: https://console.redhat.com/api/advisor/v1/export/hits.csv
  - Curl

```
curl -X GET "https://console.redhat.com/api/insights/v1/export/hits.csv" -H  "accept: */*"
```

- For JSON file type
  - Request URL: https://console.redhat.com/api/advisor/v1/export/hits.json
  - Curl

```
curl -X GET "https://console.redhat.com/api/insights/v1/export/hits.json" -H  "accept: application/json"
```

CHAPTER 3. RED HAT LIGHTSPEED ADVISOR SERVICE WEEKLY-REPORT EMAIL SUBSCRIPTION

The advisor service Weekly Report email provides a quick view of the health of your environment.

3.1. OVERVIEW OF THE ADVISOR SERVICE WEEKLY-REPORT EMAIL SUBSCRIPTION

The advisor service weekly-report email subscription sends an email message every Sunday night (United States Eastern Standard Time, UTC -05:00; Eastern Daylight Time, UTC-4:00) to the email address associated with your individual Red Hat Customer Portal user account. You are automatically subscribed to the weekly-report email the first time that you visit the advisor service.

The email subscription provides the following information about systems registered to your account:

- Number of critical rule hits in your infrastructure
- Number of impacted systems in your infrastructure
- Total number of recommendations impacting your infrastructure

3.2. UNSUBSCRIBE AND SUBSCRIBE TO THE ADVISOR SERVICE WEEKLY REPORT EMAIL

You are automatically subscribed to the Weekly Report email after the first time that you visit the advisor service. The Weekly Report email message is sent every Sunday. You can also unsubscribe to the list on the **Notification Preferences** page.

Procedure

1. Navigate to the Notification Preferences page and log in.
2. Locate the **Red Hat Enterprise Linux** heading halfway down the page on the left and click **Advisor**.
3. Under the **Reports** heading to the right, select or clear the **Weekly Report** option based on your preferences.
4. Click **Save**.

Result

You will receive the email each Sunday night from the sender, *Red Hat Lightspeed noreply@redhat.com*, with the subject line, *Weekly Red Hat Lightspeed summary report* .

CHAPTER 4. RED HAT LIGHTSPEED ADVISOR SERVICE EXECUTIVE REPORT

You can download a high-level report designed for an executive audience that summarizes the status of your infrastructure.

Executive reports are one to two-page PDF files that show the following information:

- Identified recommendations by severity
- Recently identified recommendations by category
- The top three recommendations in your infrastructure based on the greatest total risk and the greatest number of systems exposed

4.1. DOWNLOAD AN ADVISOR SERVICE EXECUTIVE REPORT

You can download an executive report from the advisor service as a PDF file. This report gives you a high-level overview of your recommendations.

Procedure

1. In the Hybrid Cloud Console, navigate to Operations > Advisor > Recommendations.
2. Click the **Download executive report** link in the upper-right corner of the **Recommendations** page.
3. Open or save the file and click **OK**.
4. If downloaded, check your download location for the PDF file.

CHAPTER 5. ENABLE NOTIFICATIONS AND INTEGRATIONS

To be notified when the advisor service detects an issue and generates a recommendation, you can enable notifications on Red Hat Hybrid Cloud Console. For example, you can configure the notifications service to automatically send an email message whenever the advisor service generates a recommendation.

5.1. ENABLE THE NOTIFICATIONS SERVICE

The notifications service enables you to control who gets notifications, how often, and by what delivery method. Your Organization Administrator can enable the notifications service.

Procedure

1. An Organization Administrator creates a User Access group that includes at least the required role.
   The group must include the **Notifications administrator** or the **RHEL administrator** role.
2. The Organization Administrator adds account members to the group.
3. Optional: Set up behavior groups for events in the notifications service. Behavior groups specify the delivery method for each notification. For example, a behavior group can specify whether email notifications are sent to all users, or just to Organization Administrators.
4. Users who receive email notifications from events must set their user preferences to receive individual emails for each event.

Next steps

In addition to sending email messages, you can configure the notifications service to send event data in the following other ways:

- Using an authenticated client to query Red Hat Lightspeed APIs for event data
- Using webhooks to send events to third-party applications that accept inbound requests
- Integrating notifications with applications such as Splunk to route advisor recommendations to the application dashboard

Additional resources

- Configuring notifications on the Red Hat Hybrid Cloud Console
- *Integrating the Red Hat Hybrid Cloud Console with third-party applications*

CHAPTER 6. REFERENCE MATERIALS

There are resources available to help you learn more about the advisor service.

See the following resources:

- Assessing RHEL configuration issues using the Red Hat Lightspeed advisor service
- Red Hat Lightspeed remediations guide
- Red Hat Lightspeed Documentation
