Abstract

By using Red Hat Lightspeed for RHEL planning, you can be proactively provided with intelligent insights of future releases, and also have access to the Red Hat Enterprise Linux roadmap plans. Additionally, Red Hat Lightspeed for RHEL planning provides intelligent information when you are evaluating an upgrade between major versions.

PROVIDING FEEDBACK ON RED HAT DOCUMENTATION

We are committed to providing high-quality documentation and value your feedback. To help us improve, you can submit suggestions or report errors through the Red Hat Jira tracking system.

Procedure

1. Log in to the Jira website.
   If you do not have an account, select the option to create one.
2. Click **Create** in the top navigation bar.
3. Enter a descriptive title in the **Summary** field.
4. Enter your suggestion for improvement in the **Description** field. Include links to the relevant parts of the documentation.
5. Click **Create** at the bottom of the window.

CHAPTER 1. DYNAMICALLY CREATING A DIGITAL ROADMAP TO MANAGE RHEL SYSTEMS

Red Hat Enterprise Linux Lightspeed for RHEL planning generates a dynamic digital roadmap based on your installed packages. By analyzing upcoming RHEL releases, it alerts you to critical package removals, deprecations, and key configuration changes.

This enables you to access crucial information for your system, plan and incorporate changes from Red Hat, and avoid problems during upgrades.

To use Red Hat Enterprise Linux Lightspeed for RHEL planning, your running system must be connected to Red Hat Enterprise Linux Lightspeed.

1.1. ACCESSING THE RED HAT LIGHTSPEED FOR RHEL PLANNING FEATURE

The Red Hat Lightspeed for RHEL planning dashboard provides you with tailored planning based on your inventory. This information can help you to plan the most relevant changes to your system. To access the Red Hat Lightspeed for RHEL planning dashboard, follow these steps:

Prerequisites

- You have a RHEL subscription.
- You have running systems connected to Red Hat Lightspeed.

Procedure

1. Access the Hybrid Cloud Console, and choose the **Red Hat Enterprise Linux** box.
2. On the **Dashboard** navigation menu, click **Planning**. You have access to the **Life Cycle** and **Roadmap** features.

Additional resources

- Connecting your systems to Red Hat Enterprise Linux Lightspeed

CHAPTER 2. USING RED HAT ENTERPRISE LINUX LIGHTSPEED FOR RHEL PLANNING DASHBOARD

Red Hat Enterprise Linux Lightspeed for RHEL planning dashboard is available inside Planning, and consists of the following components:

- **Life Cycle**
- **Roadmap**

2.1. THE LIFE CYCLE PAGE

The **Life Cycle** page shows planned package support across RHEL releases. You can view installed packages, or both installed and related packages, and generate graphics mapping package lifecycles and statuses by filtering by release name.

For example, you can get tailored information about the package status and development from Application Stream packages, such as PostgreSQL, Python, Nginx, and Ruby. You can examine current versions of the Application Stream lifecycle and get a preview of what is coming to RHEL in future releases.

You can use the **Life Cycle** page to get information about the following life cycles for your running systems:

- Red Hat Enterprise Linux
- RHEL 8 Applications Streams
- RHEL 9 Applications Streams
- RHEL 10 Applications Streams

  Red Hat Enterprise Linux

  Contains details about the following phases: Full Support, Maintenance Support, and Extended Life Phase. You can also see information on upcoming release dates and minor releases that will receive extended support.

You can use the toggle button to view just the **Installed and related** RHEL versions or the **Installed only** RHEL versions. The chart shows the current RHEL versions of your running systems, the corresponding supported years, and the coloured bars to represent information on the RHEL release support:

- **Red bar** - Shows the retired versions of a RHEL release.
- **Yellow bar** - Shows RHEL releases with support ending in 3 months.
- **Blue bar** - Shows RHEL versions that are not installed on your system, but are supported.
- **Light blue bar** - Represents the upcoming RHEL releases.
- **Vertical black bar** - Represents the currently supported RHEL version.
- **Installed only** - The **Installed only** view shows only the subset of systems where the package is installed, based on the filter that you have applied.

- **Installed and related** - This view shows the installed packages along with their newer supported versions. For example, if the **nginx 1.22** package is installed on the systems, the **Installed and related** perspective shows the **nginx 1.22** package and its newer supported versions. This helps you identify which versions are supported.

The legends are interactive. You can highlight each of them individually.

Under the chart, there is a table showing how many systems are running, the corresponding RHEL version installed, and the current status of the systems under each specific release.

- **Red warning** - Shows the number of systems with a RHEL version that is no longer supported. If you click the number under the **Systems** column, you open a table with the impacted systems. If you click a specific system, it takes you to the inventory, where you can check information on the system and take actions to mitigate the issues.

- **Yellow warning** - Shows the number of systems with RHEL versions that are going to stop receiving support in 6 months. If you click the number under the **Systems** column, you open a table with the impacted systems. If you click a specific system, it takes you to the inventory, where you can check information on the system and take actions to mitigate the issues.

- **Green signal** - Shows the systems with a supported RHEL version. If you click the number under the **Systems** column, you open a table with the currently running systems with RHEL-supported versions.

  RHEL 8, RHEL 9, and RHEL 10 Applications Streams

  These are components that are delivered and updated more frequently than the core operating system packages. It gives you flexibility to customize Red Hat Enterprise Linux without impacting the underlying stability of the platform or specific deployments.

You can use the toggle button to view just the **Installed and related** packages or the **Installed only** packages. The chart shows the current RHEL versions of the packages for your running systems, the corresponding supported years, and the coloured bars to represent information on the RHEL release support:

- **Red bar** - Shows retired packages of a RHEL release.

- **Yellow bar** - Shows packages with support ending in 6 months.

- **Blue bar** - Shows the packages that are not installed on your system, and are supported.

- **Light blue bar** - Represents the upcoming package releases.

- **Vertical black bar** - Represents the currently supported package version.

The legends are interactive. You can highlight each of them individually.

Under the chart, there is a table showing how many systems are running, the packages currently installed, and the current status of the packages under each specific release.

- **Red warning** - Shows the number of systems that have a specific retired package. If you click the number under the **Systems** column, you open a table with the impacted systems. Click a specific system to access the inventory, where you can check information on the system and take actions to mitigate the issues.

- **Yellow warning** - Shows the number of systems that require some attention. If you click the number under the **Systems** column, you open a table with the impacted systems. Click a specific system to access the inventory, where you can check information on the package and

take actions to mitigate the issues.

- **Green signal** - Shows the health of systems. Click the number under the **Systems** column to open a window showing the packages with support for the running systems.

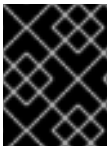

Additional resources

- Red Hat Enterprise Linux Life Cycle
- Red Hat Enterprise Linux Application Streams Life Cycle

2.2. THE ROADMAP PAGE

The **Roadmap** page gives you tailored information on important changes coming to RHEL in the future. It shows a list of the **Upcoming deprecations** of packages that you are currently using, the **Upcoming changes**, and the **Upcoming additions** that could affect your system.

You can filter the features by Name, Type, and Release Date to check specific feature changes.

IMPORTANT

Upcoming features are subject to change. The dates mentioned in the Roadmap are close approximations, non-definitive, and subject to change.

- **Upcoming deprecations** - Shows the number of upcoming deprecations that could affect your running RHEL systems.
- **Upcoming changes** - Shows the number of upcoming changes that could affect your running RHEL systems.
- **Upcoming additions** - Shows the number of upcoming additions that could affect your running RHEL systems.

You can filter the features by name, and use the toggle button to view just the relevant features, or all features. It gives you a list, showing the features, the type of feature (Addition, Change, Deprecation), their RHEL release version, and the feature release date.

You can choose a specific feature from the list and click the expand arrow to view additional details about that specific feature. It shows you the number of systems that are potentially affected by that specific feature change. If you click the number of the potentially affected systems, it takes you to the inventory, where you can check information on the system and take actions to mitigate the issues.
